

TECHNICAL DATA SHEET

CyFlow™ HLA-A2 Alexa Fluor™ 647 Anti-Hu; Clone BB7.2

REF CJ927428

For Research Use Only.
Not for use in diagnostic or therapeutic procedures.

Specifications

Antigen	HLA-A2
Alternative Names	—
Clone	BB7.2
Clonality	monoclonal
Format	Alexa Fluor™ 647
Host / Isotype	Mouse / IgG2b
Species Reactivity	Human
Negative Species Reactivity	—
Quantity	100 tests
Immunogen	HLA-A2 solubilised by papain

Specificity

The mouse monoclonal antibody BB7.2 recognizes an epitope at the C-terminus of α -2 helix and a turn on one of the underlying β strands within the human HLA-A2 histocompatibility antigen.

Contact Information:

Sysmex Partec GmbH • Am Flugplatz 13 • 02828 Görlitz • Germany

Application

The reagent is designed for Flow Cytometry analysis of human blood cells. Recommended usage is 5 µl reagent / 100 µl of whole blood or 10⁶ cells in a suspension. The content of a vial (0.5 ml) is sufficient for 100 tests.

Other usages may be determined from the scientific literature.

Storage Buffer

The reagent is provided in stabilizing phosphate buffered saline (PBS) solution, pH ≈7.4, containing 0.1% (w/v) sodium azide.

Storage and Stability

Storage	Avoid prolonged exposure to light. Store in the dark at 2-8°C. Do not freeze.
Stability	Do not use after expiration date stamped on vial label.

Background Information

HLA-A2 (44 kDa) is the most frequent HLA-A allele in human ethnic populations. HLA-A, together with HLA-B and HLA-C, represent human HLA class I major histocompatibility (MHC) antigens. These intrinsic membrane glycoproteins are expressed on nucleated cells and noncovalently associate with an invariant β2-microglobulin. They carry foreign determinants important for immune recognition by cytotoxic T cells, thus important for anti-viral and anti-tumor defense.
